- Fully integrated, air cooled, 14 V inverter bridge and its control with embedded self diagnosis and thermal protection.
- Standard LIN (1.3 or 2.0) piloted vehicle interface
- Customizable Control ASIC per application (through OTP bits)
- Dependable architecture:
- Safe: hardware digital input enabling to inhibit cranking in case of vehicle hazard detection
- Reliable: component number reduction, technical choices all validated for high temperature and long term operations (ASICs qualified at 175°C)
- Available: Revolutionary power electronics integration (IML) with super low thermal resistance stack designed for continuous and transient mode

INNOVATIVE CHARACTERISTICS:

Versus other micro-hybrid technologies

- Noiseless and immediate cranking (350ms typical)
- Comfort Stop (engine coasting sequence divided by 2)
- Best in class alternator efficiency mode thanks to synchronous rectification (75% VDA)
- High availability for aggressive stop start strategy and consequently higher CO2 savings (650.000 cycles)
- Thermal management enabling to deliver extra output at low speed when machine and engine are cold Low voltage drop in cranking phase (enabling to suppress costly additional network protection features)
